

ROYAL AFA

(Alkali free Accelerator for wet shot Crete)

Description: Royal AFA is an alkali free liquid accelerator for wet shot Crete mix. The mix containing Royal AFA reduce and effect of alkali on concrete during shot Creting process Royal AFA also make the shot Crete mix highly cohesive reducing losses on rebound effectively.

Application: Royal AFA is dosed at the shot Crete gun nozzle in the wet shot Creting process. The mix is prepared as per design calculation and availability of aggregates, cement water and water reducing agents. The liquid mix shot thought the nozzle. At the end of nozzle. Royal AFA.

Dosage/Usage: Royal AFA is normally added to the shot Crete mix contain hydrated cement and aggregates at a ratio 3-10% by weight of cement. Initial setting time – 2 to 6 minute and final setting time – 25 to 40 minute.

Technical Data:

Appearance	-	Off white liquid
Relative Density	-	1.44 ± 0.02
Chloride Content	-	<0.2%
Self Life	-	6 months
Storage	-	keep it Under shed

Packing - 250kg drums

Safet Royal AFA non-toxic, non-flammable however any contacat with human body must be wasted with plenty water.

IMPORTANT

The product are manufactured under stringent quality standard specification and guaranteed against any manufacturing defect based our practical experience and exposure, and are believed to be most appropriate and correct. But no liability can be accepted by us as the condition of use of such products are beyond our control. The user is expected to check, the suitability of particular product for his intended uses
