

**ROYAL FAST CURE - R**  
**(Resign based Concrete curing compound)**

**Description:** Royal fast cure - R is a synthetic Resin emulsion based concrete curing compound with medium dispersed aluminum flakes, Royal fast Cure - R is especially use full for curing pavement concrete and structural segments pre-cast elements and so on. The membrane formed by the Application of Royal fast Cure R also import high water retention and refection effect suitable for curing concrete at tropical atmosphere.

**Application:** Royal fast Cure - R should be applied over the freshly placed concrete, A special give has to but taken to visualize no evaporation of surface water. Royal fast Cure forms a thin on concrete surface and the film should be protected from initial heat. Rain or any thermal calamity the film decays with time.

**Dosage/Usages:** generally Royal fast Cure -R covers around 5-7 Sq.mt/kg depending upon application technique, substrate porosity and climatic conditions. Applied either by Roller or air spray, continues stirring is recommenced before actual application.

**Technical Date:**

Base	-	Resign Based
Appearance	-	Light gray Emulsion
Relative Density	-	0.80 ± 0.02
Chloride Content	-	NIL
Reflection index	-	65-70% of Mgo
Water Retention	-	90-95%
Self Life	-	1 year
Packing	-	50/200 kg drums
Storage	-	keep it under shade.

**IMPORTANT**

The product are manufactured under stringent quality standard specification and guaranteed against any manufacturing defect based our practical experience and exposure, and are believed to be most appropriate and correct. But no liability can be accepted by us as the condition of use of such products are beyond our control. The user is expected to check, the suitability of particular product for his intended uses
