

ROYAL FAST CURE

(Concrete Curing Compound)

Description: Royal fast cure is a ready to use synthetic white pigment concrete curing compound. It is especially use full for curing canals Royal fast cure induces high reflection effect and better water retention for curing concrete at tropical atmosphere.

Application: Royal fast cure is generally application the green concrete just after evaporation of surface water after drying Royal fast Cure forms a thin film on the concrete surface which decays with time the film should be protected from initial heat, rain or any thermal calamity.

Dosage/Usages: Royal Fast cure is generally used 1 kg / 5 Sq.mt. But it is depend on concrete surface. Royal fast cure can be applied by brush or roller or air spray.

Technical Date:

Appearance	-	White colour
Form	-	Liquid
Relative Density	-	1.08 ± 0.02
PH Value	-	Minimum 6
Chloride content	-	NIL
Reflection index	-	65-70% of Mgo
Water Retention	-	90-95%
Self Life	-	1 year
Packing	-	20/50/200 kg drum
Storage	-	keep it under shade.
Health & Safety	-	Royal Fast cure is Non toxic, non inflammable, and non hazardous

IMPORTANT

The product are manufactured under stringent quality standard specification and guaranteed against any manufacturing defect based our practical experience and exposure, and are believed to be most appropriate and correct. But no liability can be accepted by us as the condition of use of such products are beyond our control. The user is expected to check, the suitability of particular product for his intended uses
