

ROYAL FIX -W

(Liquid Integral Waterproofing compound)

Description: Royal fix - w is a normal setting cement integral waterproofing compound in a liquid form to be added to the concrete or mortar for ensuring better waterproofing if a proper ratio of cement, sand and Royal fix –w is maintained, water seepage through structure can be minimized.

Application: Royal fix-w is mix in the concrete to achieve a non- permeable, matrix reducing the water penetration and also shows dispersing effect to reduce the total water demand in concrete Royal Fix – W is improves compaction and cohesion of cement mortar and concrete, Royal Fix- W increases density and minimized honey combing.

Dosage/Usages: Royal fix –w should be added to the concrete mix along with gauging water at the rate of 200 ml per 50 kg cement bay.

Technical Date:

| | | |
|------------------|---|---|
| Appearance | - | Brown liquid |
| Relative Density | - | 1.10±0.02 |
| PH value | - | 6 (minimum) |
| Chloride Content | - | <0.2% |
| Air cement | - | <1% |
| Self Life | - | 1 year |
| Storage | - | keep it under shade |
| Packing | - | 50/250 kg drums |
| Health & safety | - | Non toxic, Non- inflammable and non - hazardous |

IMPORTANT

The product are manufactured under stringent quality standard specification and guaranteed against any manufacturing defect based our practical experience and exposure, and are believed to be most appropriate and correct. But no liability can be accepted by us as the condition of use of such products are beyond our control. The user is expected to check, the suitability of particular product for his intended uses
