

**ROYAL PLAST FA**  
**(Admixture for foam Concrete)**

**Description:** Royal Plast FA is water based chloride free liquid. It is a foam generating and stabilizing Admixture for concrete. It provides a heat insulating effect on concrete and reduces the density of concrete.

**Application:** Royal Plast FA is a foaming agent which has to be added to cement paste or mortar in special foam concrete mixture consists of three drums housing rotating shafts with blades. The resultant foam concrete has to be directly laid on the application sites

**Dosage/Usages:** 0.5 – 1 ltr. per bag of cement depending upon the desirable of concrete, cement quality and quantity.

Usage are these:

- i) High light weight concrete
- ii) Squeeze cementing of depleted Zone.
- iii) Structural and Heat insulating foam concrete.
- iv) Primary cementing of weak formations.

**Technical Date:**

Appearance - Brown Liquid

PH Value - above 10

Compressive strength - 2-4 kg

**IMPORTANT**

The product are manufactured under stringent quality standard specification and guaranteed against any manufacturing defect based our practical experience and exposure, and are believed to be most appropriate and correct. But no liability can be accepted by us as the condition of use of such products are beyond our control. The user is expected to check, the suitability of particular product for his intended uses
